

W.S.  
3-31-04

**CITY OF ALEXANDRIA**  
**CITY COUNCIL WORK SESSION**  
*Wednesday, March 31, 2004, 5:30 pm*

**AIR QUALITY AND MIRANT POTOMAC RIVER POWER PLANT**

 *Transportation & Environmental Services*

---

---

---

---

---

---

---

---

**PURPOSE OF THIS DISCUSSION**

Provide City Council with Overview of Air Quality Issues

Update City Council on Air Quality issues relating to Mirant

Seek City Council's concurrence or guidance on future actions

 *Transportation & Environmental Services*

---

---

---

---

---

---

---

---

**Sources of Air Pollution**

- LOCAL SOURCES:
  - Area Sources
  - Mobile Sources
  - Point Sources
- DISTANT SOURCES:
  - Transport Issues
  - Power Plants

 *Transportation & Environmental Services*

---

---

---

---

---

---

---

---

## Ambient Air Monitoring

### National Ambient Air Quality Standards:

- CO (Carbon Monoxide)
- NOx (Oxides of Nitrogen)
- SO2 (Sulfur Dioxide)
- Lead
- PM 10, PM 2.5
- Ozone (Alexandria and the region are designated as a severe non-attainment area)

 *Transportation & Environmental Services*

---

---

---

---

---

---

---

---

---

---

## What is the size of these Particles

 *Transportation & Environmental Services*

---

---

---

---

---

---

---

---

---

---

## TYPES OF FINE PARTICULATES: Primary Vs. Secondary

 *Transportation & Environmental Services*

---

---

---

---

---

---

---

---

---

---

## Monitored PM10 Data

Transportation & Environmental Services

---

---

---

---

---

---

---

---

---

---

## Monitored PM 2.5 Data

Transportation & Environmental Services

---

---

---

---

---

---

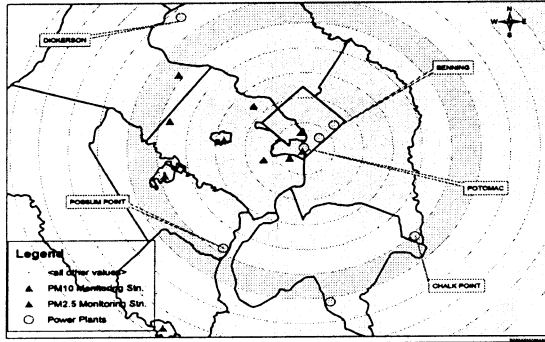

---

---

---

---

## REGIONAL POWER PLANTS AND AIR MONITORING STATIONS

Transportation & Environmental Services

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

## MIRANT, Being A Large Industrial Facility

- HAS an impact on the community
  - Coal and Ash Handling
  - Vehicle Traffic
  - Railroad Deliveries
  - Noise from Plant Operation
  - Last but not the least AIR POLLUTION

**Transportation & Environmental Services**

---

---

---

---

---

---

---

---

---

---

## Mirant Implemented Control Measures

- High-efficiency precipitators to eliminate any visible emissions and control particulate emissions
- Use of low-sulfur coal (reduces sulfur emissions)
- Modified boiler controls to lower nitrogen oxide (NOx) emissions by 28% since 1990
- Added Continuous Emissions Monitoring System on all stacks to measure Opacity, SO<sub>2</sub>, NO<sub>x</sub> and CO<sub>2</sub>
- Bag house on fly-ash handling silo

**Transportation & Environmental Services**

---

---

---

---

---

---

---

---

---

---

## Fugitive Dust Control Measures

Current Control Measures includes:

- Use of encrusting agent on the coal pile.
- Use of surfactant to reduce coal dust when dropping to the pile.
- Use of dumper door curtain to enclose the handling during unloading process.
- Compaction/ management of the coal pile.

 *Transportation & Environmental Services*

---

---

---

---

---

---

---

---

## Summary of Chimento-Hertel Report

- **COMPILATION OF**
  - General health studies documenting that long term exposure to fine particulate matter may pose health risks
  - Dr. Levy's Five Power Plant Study
  - Virginia DEQ Analysis of particulates on the windows
  - University of Pennsylvania Study
- **FOCUS ON PARTICULATES: PM2.5**

 *Transportation & Environmental Services*

---

---

---

---

---

---

---

---

## City's Actions

- **INCREASED PM 10 AND PM 2.5 MONITORING**
- **INCREASED FACILITY INSPECTIONS**
- **CLOSE COORDINATION WITH VADEQ, EPA, DAILY ENFORCEMENT ACTIONS ON NOx ISSUES**
- **REGIONAL LEVEL AIR QUALITY PLANNING**
- **COORDINATE WITH STATE/FEDERAL LEGISLATORS**
- **HIRING DR. JONATHAN LEVY FOR ADDRESSING PM2.5 IMPACTS ON THE CITY: DRAFT REPORT**

 *Transportation & Environmental Services*

---

---

---

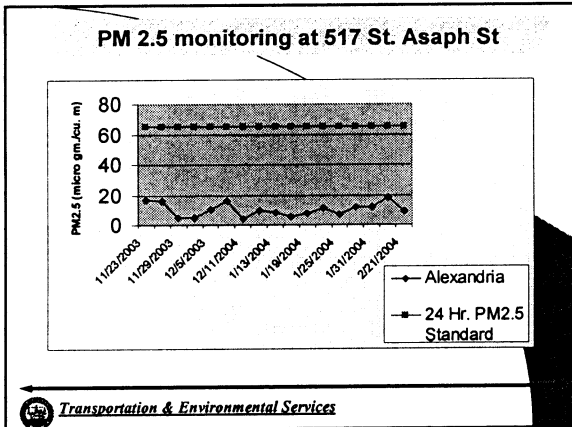

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

### City's Outside Consultant for Mirant and PM<sub>2.5</sub> issues

**Dr. Jonathan I. Levy**

Assistant Professor of Environmental Health and Risk Assessment, Departments of Environmental Health and Health Policy and Management  
Harvard School of Public Health

Publications include 30+ peer-reviewed journal publications, focused on air pollution exposures and health risks

**Transportation & Environmental Services**

---

---

---

---

---

---

---

---

---

---

### Dr. Levy's work quoted in Chimento-Hertel Report – 5 Power Plant Study

The Importance of Population Susceptibility for Air Pollution Risk Assessment: A Case Study of Power Plants Near Washington, D.C., Jonathan I. Levy, *et al.*, Greco, and John D. Spengler. Environmental Health Perspectives, Volume 110 No. 12 (2002), pp. 1253-1260

**Transportation & Environmental Services**

### Distribution of total exposure reduction as a function of distance

Transportation & Environmental Services

---

---

---

---

---

---

---

---

---

---

### Baseline health estimates, standard approach (annual, primary + secondary PM)

Plant	Deaths/year	CHA/year	Asthma ERV/year
Benning	2	0.7	1.6
Chalk Point	100	30	68
Dickerson	60	17	40
Possum Point	50	14	36
Potomac River	59	16	41
<b>Total</b>	<b>270</b>	<b>78</b>	<b>190</b>

Transportation & Environmental Services

---

---

---

---

---

---

---

---

---

---

### Health benefits from BACT, standard approach (annual, primary + secondary PM)

Plant	Deaths/year	CHA/year	Asthma ERV/year
Benning	1	0.4	0.9
Chalk Point	79	23	52
Dickerson	49	14	32
Possum Point	39	11	28
Potomac River	38	11	27
<b>Total</b>	<b>210</b>	<b>59</b>	<b>140</b>

Transportation & Environmental Services

---

---

---

---

---

---

---

---

---

### Analysis of Particulate Matter Impacts for the City of Alexandria

- Purpose:
  - To apply the methods and results from our earlier analysis, with a focus on the Potomac River power plant and the population of Alexandria
  - To compare the contributions of the Potomac River plant to PM<sub>2.5</sub> levels with contributions of other power plants and sources
  - To compare the health impacts in Alexandria with the regional health impacts

 Transportation & Environmental Services

---

---

---

---

---

---

---

---

---

---

### Composition of ambient PM<sub>2.5</sub> in Richmond and Washington

 Transportation & Environmental Services

---

---

---

---

---

---

---

---

---

---

### Should we expect PM-related health impacts in Alexandria?

- Annual NAAQS for PM<sub>2.5</sub> is 15 µg/m<sup>3</sup>
- Average PM<sub>2.5</sub> concentrations in Alexandria are approximately 13-15 µg/m<sup>3</sup>, with a pronounced summer time peak
- NAAQS are not meant to be zero risk levels
- Current health evidence demonstrates effects from short-term and long-term exposure below NAAQS
- Although uncertainty remains, reasonable to conclude that PM<sub>2.5</sub> related health effects could be anticipated in Alexandria at current ambient concentrations.

 Transportation & Environmental Services

---

---

---

---

---

---

---

---

---

---

---

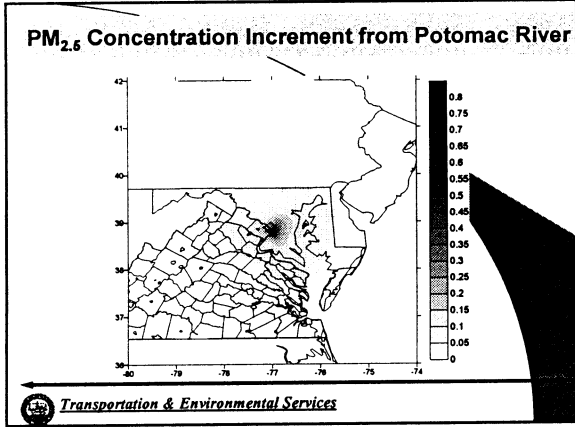

---

---

---

---

---

---

---

---

---

---

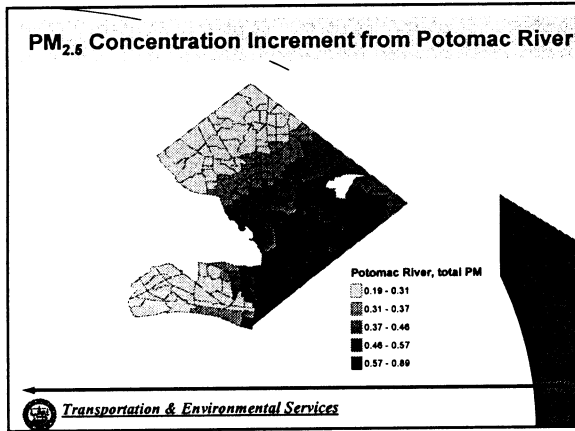

---

---

---

---

---

---

---

---

---

### PM<sub>2.5</sub> Concentration Increment from Potomac River

- Maximum total PM<sub>2.5</sub> concentration increment caused by Potomac River is approximately 0.9 µg/m<sup>3</sup>, 4 km from the plant (in Washington, DC)
- Within Alexandria, total PM<sub>2.5</sub> concentration increment ranges from 0.19-0.58 µg/m<sup>3</sup>
- Gradient exists across Alexandria, with higher levels generally in closer proximity to the plant (although census tract housing Potomac River has relatively lower concentrations)

Transportation & Environmental Services

---

---

---

---

---

---

---

---

---

---

## PM<sub>2.5</sub> Concentration Increment due to 5 power plants

- Aggregate contribution of five power plants to total PM<sub>2.5</sub> in Alexandria ranges from 0.63-1.1 µg/m<sup>3</sup> on annual average basis
  - Approximately 4-8% of ambient PM<sub>2.5</sub>
  - Of this 4-8%, Potomac River contributes between 29% and 54% (i.e., it contributes 1-4% of ambient PM<sub>2.5</sub> in Alexandria)

 Transportation & Environmental Services

---

---

---

---

---

---

---

---

## % of PM<sub>2.5</sub> concentration increment from 5 power plants associated with Potomac River

 Transportation & Environmental Services

---

---

---

---

---

---

---

---

## Health Impacts in Alexandria

•Five power plants are estimated to contribute slightly over 2 deaths/year. (This number is to be understood in the context that the baseline number of deaths in Alexandria each year in 30+ age group (assumed at-risk population) is approximately 800.)

•Potomac River is estimated to contribute slightly less than 1 death/year.

	Deaths/year	CHA/year	Asthma ERV/year
Benning	0.02	0.005	0.006
Chick Point	0.4	0.1	0.2
Dickerson	0.4	0.1	0.2
Possum Point	0.7	0.2	0.4
Potomac River	0.9	0.3	0.4
<b>Total</b>	<b>2.3</b>	<b>0.7</b>	<b>1.2</b>
% of total from Potomac River	37%	37%	36%
% of total in region	0.9%	0.8%	0.6%

 Transportation & Environmental Services

---

---

---

---

---

---

---

---

### Health Benefits in Alexandria of BACT

•BACT at five power plants is estimated to have a public health benefit of 1.7 fewer deaths/year.

•BACT at Potomac River is estimated to have a public health benefit of 0.5 fewer deaths/year.

	Deaths/year	CH4/year	Asthma ERV/year
Berning	0.007	0.002	0.004
Chalk Point	0.3	0.09	0.2
Dickerson	0.3	0.09	0.2
Potomac River	0.5	0.2	0.3
Potomac River	0.5	0.2	0.3
Potomac River	0.5	0.2	0.3
Potomac River	0.5	0.2	0.3
Potomac River	0.5	0.2	0.3
Total	1.7	0.6	0.9
% of total from Potomac River	31%	31%	31%
% of total in region	0.8%	0.8%	0.6%

 *Transportation & Environmental Services*

---

---

---

---

---

---

---

---

---

---

---

---

### Conclusions (I)

- While the Potomac River plant is not the dominant contributor to either deaths or PM<sub>2.5</sub> concentrations in Alexandria, it is likely the single source that contributes most to PM<sub>2.5</sub> levels in Alexandria.
- If BACT applied to five power plants, controls at Potomac River will provide highest benefit in Alexandria (comparable benefits from controls at Possum Point).

 *Transportation & Environmental Services*

---

---

---

---

---

---

---

---

---

---

---

---

### Conclusions (II)

- Important to realize strengths and weaknesses of estimates
  - Based on atmospheric dispersion models and large-scale epidemiology studies
    - Uncertainty exists, but estimates are most reasonable values
    - No other approach could yield this information
  - Regional dispersion model cannot capture very short-range effects

 *Transportation & Environmental Services*

---

---

---

---

---

---

---

---

---

---

---

---

### Conclusions (III)

- Reducing emissions from Potomac River and other power plants would provide most population health benefits regionally, but individuals "locally" would benefit most

 Transportation & Environmental Services

---

---

---

---

---

---

---

---

### NOx Issues

NOx is a precursor to Ozone. NOx reductions are required at the Mirant to meet the region's Ozone standard as part of the SIP process.

State Operating Permit is the tool VDEQ uses to require NOx reductions at Mirant.

Permit limits became effective in Summer 2003 and limits NOx to 1,019 tons from May 1, and September 30.

Mirant failed to meet the limit of 1,019 tons in 2003.

EPA and VDEQ issued NOVs.

 Transportation & Environmental Services

---

---

---

---

---

---

---

---

### NOx Control Alternatives

- FUEL SWITCH.....Natural Gas**
- Requires major upgrade
  - Upgrade of the plant, Feasibility questionable
  - High Capital costs

- SOFA (Separate Overfire Air) on Units 3,4,5**
- 20-35% reduction in NOx, process control and ductwork modifications
  - No ammonia usage, storage, or slippage

- SNCR (Selective Non-Catalytic Reduction)**
- 25-35% reduction in NOx
  - Uses ammonia (3-4 trucks/week)
  - Ammonia slip issue

 Transportation & Environmental Services

---

---

---

---

---

---

---

---

## NOx Control Alternatives

**SACR (Selective Auto-Catalytic Reduction)**

- Upto 70% reduction of NOx
- Requires on-site natural gas or propane supply
- Require ammonia deliveries and storage

**SCR (Selective Catalytic Reduction)**

- Upto 95% reduction of NOx
- Space constraint
- Requires ammonia deliveries and storage
- Ammonia slippage issue
- High Capital cost

 *Transportation & Environmental Services*

---

---

---

---

---

---

---

---

---

---

## Legislative Attempts

**Achieve City's objectives through introduction of State legislation "Clean Smoke Stacks Bill" in 2004**

- Modeled after North Carolina Bill that targeted Duke Energy and forced BACT.
- Tighter than federal regulations.
- The Bill has been carried over. Possibility of reintroduction in 2005 session.
- Proposed 75% NOx reductions from 1997 levels
- Proposed 75% SOx reduction from levels permitted by Acid Deposition Control Rules
- Proposed "No trading" to achieve above reductions
- Compliance date 2009 (2014 with consent decree to cease operations by that date)

 *Transportation & Environmental Services*

---

---

---

---

---

---

---

---

---

---

## Staff's recommendations

- **Short term Actions:**

**PM2.5 and NOx**

- Support operating permit/ consent order requiring SOFA on unit 3,4, and 5, and
- Phase out of Unit 1 and 2,
- Alternatively, SOFA on Units 1 to 5
- Oppose control technologies that requires ammonia for controls.
- Oppose control technologies that will require major upgrades that will prolong the useful life of the plant.
- Support CAP and "No Trading" for summertime. This will require minimizing the production during summer.

 *Transportation & Environmental Services*

---

---

---

---

---

---

---

---

---

---

### Staff's recommendations

- **Short term Actions:**

Fugitive Dust / PM 10

- Support additional controls at fly-ash handling facility to address fugitive dust issues.
- Improvements to Coal and Ash Handling facility.
- Fund supplement environmental projects as proposed in lieu of penalties paid by Mirant to State for 2003 violations.

 *Transportation & Environmental Services*

---

---

---

---

---

---

---

---

### Staff's recommendations

- **Long Term Actions:**

- Support and Track state and federal legislation.
- Support phase out of the plant.
- Continue to engage state and federal regulators concerning enforcement issues related to Mirant.
- Support installation of Mercury Emissions Controls.

 *Transportation & Environmental Services*

---

---

---

---

---

---

---

---

### Mirant's Operating Permit

Mirant Operating Permit limiting summertime NO<sub>x</sub> emissions is currently out for public comments

Public hearing is scheduled for  
 Date: Monday, April 12, 2004  
 Location: Lee Center

Permit as proposed does not allow trading

 *Transportation & Environmental Services*

---

---

---

---

---

---

---

---

## TRI Data and Purpose

- Emergency Planning and Community Right to Know Act (EPCRA)
- The law requires industrial facilities such as electric utilities report annually on their releases of chemicals
- The reports contain information about the types and amounts of toxic chemicals that are released each year into the air, water, and land. Toxics Release Inventory (TRI), a database that tracks nearly 650 chemicals released
- Ease public access to environmental information

 *Transportation & Environmental Services*

---

---

---

---

---

---

---

---

## TRI Data

- In 1997, expanded to include electric power industry: 1<sup>st</sup> report due by Mirant in 1999.
- Not all chemical releases are regulated, TRI DOES NOT ASSESS RISK
- Mercury compounds are required to be reported
- Solely, because of Mirant's releases, 2002 TRI data (to be released in April) will show the City being ranked 9<sup>th</sup> in Commonwealth of Virginia.

 *Transportation & Environmental Services*

---

---

---

---

---
